

ConceptRadar

Problem & Opportunity

Most discussions on AI safety focus on published research, leaving early-stage startups—often from non-traditional hubs—invisible. These startups may hold breakthroughs critical to global AI safety, yet fail because founders lack marketing channels, networks, or resources. Each unseen concept represents a potential gap in our collective ability to secure advanced AI.

Our Hypothesis

Making early-stage AI safety startups visible will accelerate adoption of diverse innovations, strengthening system robustness and resilience. Early visibility is urgent: each week without intervention risks critical solutions being lost. ConceptRadar creates a first-mover opportunity for funders to shape a global ecosystem of AI safety innovation.

Solution: ConceptRadar.org

A *free, globally accessible platform* for early-stage AI safety startups. Think of it as a radar in a dark sky: each startup or expert lights up a dot, revealing patterns critical to navigating AI safety. The platform leverages network effects to grow visibility, collaboration, and community:

- **Visibility Layer:** searchable, AI-assisted database; partnerships with organizations like BlueDot and 80,000 Hours; gamified recognition for concepts and contributors.
- **Collaboration & Co-Creation:** feedback, mentoring, and partnership facilitation. Experts gain early access to innovative concepts.
- **Community / Social Layer:** forums, spotlight events, and discussion threads incentivizing peer and expert participation.

Why Now & Why Funders Should Care

- Exclusive early access to a curated global network of AI safety startups.
- Opportunity to shape a platform providing resilient and diverse AI safety solutions.
- Amplifies impact by accelerating adoption of critical concepts globally.

Competitive Advantage

- Existing platforms focus mostly on later-stage startups and funding.
- ConceptRadar is *first-of-its-kind*: free, inclusive and globally accessible, AI safety-focused, and community-driven.
- Fills a strategic gap, especially for underrepresented regions and early-stage concepts.

MVP & Roadmap (6 Months)

- **Prototype (6 weeks):** concept submission & keyword search.
- **MVP (6 weeks):** searchable global database, filters, AI-assisted discovery.
- **Version 1.0 (6 weeks):** Collaboration & Co-Creation layer.
- **Version 2.0 (6 weeks):** Community / Social layer.
- **Version 3.0 (planned):** Additional features, community building, maintenance.

Call to Action

Early funding accelerates launch and global adoption, ensuring that critical AI safety innovations are not lost. Partner with ConceptRadar to illuminate the dark sky of early-stage AI safety and secure the foundations of a safer AI future.
